 No Effect 0

▼ Internal 2

- High adaptability to any situation that it finds itself in, being resourceful at convenient plot points.
- Very mobile on flat open surfaces with its ball-styled body.
- World class interfacing methods, including an array of antennae, hacking tool, clamp, lighter, and repairing tools.

 Strengths

- Struggles to move over stairs, low-traction surfaces, and strong magnetic fields.
- Can't carry very large objects or deal with enemies that over-encumber its small stature.
- Couldn't do very well in any aquatic environments, as it is an electronic device that needs to have proper insulation to function.

 Weaknesses

▼ External 2

- Works really well with any spacecraft it might come into contact with, as much of its toolkit have to do with navigating through space and performing maintenance on these vehicles.
- Takes full advantage of small access spaces typically reserved for work done by small specialized droids.

 Opportunities

- Struggles immensely with any electromagnetic impedance devices, such as energy shields and magnetic fields.
- Has little to no armor for any combative situations that a main character of an intergalactic space war might find themselves in.
